## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 29 February 2008 has been entered.

2. In response to the previous office action, Applicant has amended claims 4, 5, 7, and 8 and cancelled claim 6. Claims 4, 5, 7, and 8 have been examined.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 4 and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent No. 6,385,729 to DiGiorgio et al.

As per claim 4, DiGiorgio discloses a secure token device, such as a smartcard (i.e. a chip card) to be used with a reader (i.e. a loading station) for gaining Internet access via a remote computer system (see column 4, line 53 to column 5, line 57). The User ID for access is retrieved from the chip card (see column 10, lines 54-60). The chip card has a microprocessor and RAM (non-volatile memory) (see column 6, lines 30-34). After authentication (see column 10, lines 24-52), content may be downloaded from an ISP, such as for web browsing (see column 12, lines 1-7).

Regarding claim 5, since the chip card is detachable from the reader, it is inherently replaceable.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 7 and 8 rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,385,729 to DiGiorgio et al. as applied to claim 4 above, and further in view of U.S. Patent No. 6,820,203 to Okaue et al.

DiGiorgio does not disclose the encrypting of retrieved information in storage.

Okaue discloses the encrypting of smart card content, such as music, in the memory of the smart card in an encrypted form (see column 10, lines 35-51).

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the invention of DiGiorgio by encrypting downloaded content in storage, as per Okaue's analogous teachings.

### ***Response to Arguments***

5. Applicant's arguments with respect to claim 4 et al. have been considered but are moot in view of the new ground(s) of rejection.
